White Sands Missile Range (WSMR), at just over 2.2 million acres, is one of the largest expanses of relatively undeveloped land remaining in the southwestern United States. The Missile Range is located in south-central New Mexico at the northern edge of the Chihuahuan Desert. White Sands National Monument and the San Andres National Wildlife Refuge are located entirely within WSMR's boundaries.

Elevations range from about 3,850ft in the Tularosa Basin to nearly 9,000ft at Salinas Peak in the San Andres mountains. The Malpais lava flow, gypsum dunes, and desert scrub dominate the Tularosa Basin in the southern and central part of WSMR. In the north, broad grassy playas and rolling yucca grasslands dominate over swaths of sand, sage, and creosotebush. Mesquite dunes and creosote flats give way to broad grassy foothills leading up to steep rocky cliffs and pinyon juniper woodlands. These unique habitats support 289 documented bird species.

This list has been compiled from various reliable sources working within WSMR (contributors listed below). The names and sequence of species conforms to the 47th Supplement To The American Ornithologists' Union Check-list of North American Birds (2006). It is intended as a reference of bird species documented on WSMR. Upon verification, additional species may be added to this list by contacting Trish Griffin at 505-678-2029.
